RE: I request your assistance and support to modernize America's voting practice and custom via:  
EVoteTechnology,

Dear Mr. President,

First, allow me to congratulate you and your Vice President, Kamala Harris regarding your historical presidential administration, as our nation's first female Vice President of the United States of America, which once again proves that our country truly is a nation that makes what seems to be impossible, the next reality that we find ourselves living.

I wish to share with you a passion that I have kept alive in my heart for over thirty (30) years, a passion that was ignited within me when I was attending DeVry Institute of Technology, in the summer of 1986, now DeVry University. I still believe it shall become a reality that we shall find ourselves living and my hope is that it shall become a reality during your first term as President of the United States.

The passion I speak of is what I've coined "EVoteTechnology", which I believe to be a noun and a verb, first because modernizing America's voting technologies requires taking action to change our method of voting specifically in future U.S. Presidential elections and the end result shall establish a new reality of equality and integrity in our elections that has never existed before in this country.

I'm a union electrician by trade, I.B.E.W. L.U. 124, although I haven't worked in my trade for several years, I have maintained my membership by keeping my union dues paid. I'm still inspired from the opportunity that I had after I completed my apprenticeship which enabled me to provide for my four (4) children by earning a decent wage with health, dental, vision, and retirement benefits.

I shall maintain my code in life that I live by while I share with you Mr. President my Vision of EVoteTechnology and that code in life is KISS: "KEEP IT SIMPLE STUPID".

The 2000 Presidential election was my wake-up call to action, however, I have always had a deep desire from a very young age to change the World and I believe that EVoteTechnology shall change the World as we know it in the United States and in every part of the World where true integrity is mandated by the people concerning their elections.

We must all summon up the moral courage for the sake of our children's children's children to change what has been allowed to jeopardize the very rights we as Americans hold so dear, those are the rights to have your vote counted and the right to obtain equal justice under law, there are other rights to be sure, however, these are the two that ensure that all our rights remain unabridged.

Since the 2000 Presidential election our country has undergone unprecedented changes.

We have went from an analog to a digital phone network, the next upgrade shall soon be 5G connectivity, modernized our internet via IPv6 protocol, we've abandon our normally scheduled television, pre-recorded programming, and replaced it with an on-demand and live streaming format.

We have enhanced our monetary and banking systems' security with 3-D Security Ribbon dollar bills and Chip-in credit cards technology, our former analog AM/FM radio signals have been made obsolete by government issued digital broadcasting bandwidths, modern health care has been revolutionized by the DiVinci, Robotic assisted surgeries and the digitization of patients' medical records.

Finally we have become a country that now embraces the "First to File" doctrine of law that the rest of the World has imposed upon inventors and now we have chosen to relinquished our nation's long held tradition of "First to Invent" that had been the law of the land since our nation's inception.

I believe the first steps for achieving change is first to recognize the need for change, and then having the moral courage to make the change that is needed. Now in the 21<sup>st</sup> century our nation has witnessed the unadulterated need to protect ourselves from individuals who have devised plans and consorted together across our nation to destroy the very fabric that our democracy and governments were established upon, which is that every legally registered voter's constitutional right to participate in their local, state, and national elections and to have their vote counted.

My Vision of modernizing America's voting technologies via EVoteTechnology requires updating our election technology from identifying registered voters to new technologies of authenticating registered voters, thereby eradicating voter fraud, combating identity theft, and giving registered voters an additional level of security during Electronic Point of Sale (EPOS), ATM, cryptocurrencies transactions, and other transactions which require verification of their identity.

We are now engaged in a new 21<sup>st</sup> century American revolution in our nation for our right to vote, to secure for ourselves and our families freedom from oppression, to be allowed equal protection under the law, and to be permitted to engage in our individual pursuits of happiness.

Mr. President you have been entrusted with great power as the leader of our great nation for the next four (4) years, with this power comes an even greater responsibility to lead by example by upholding our nation's core values of equal justice under the law and making sure that every legally registered voter's right to participate in our elections remain unabridged and that their vote are be counted.

I believe that two of the best examples of equality in life that grant no extensions nor make any exceptions are time and death, that's to say everyone is given the same twenty-four (24) hours of each day that we are blessed to live and we were all born to die, no one gets out of of this life alive, however, we shall each leave an individual legacy that shall be the total of the deeds we did or did not do and the words we spoke or failed to speak during the lifetime we have lived

My only question to you Mr. President is when history records the years of your presidency shall it reveal that you were able to recognize our nation's need to modernize our voting technologies and that you also had the moral courage to mandate the changes required to instill true integrity into our American elections or shall history reveal that our archaic election practices and custom remained unchanged?

Mr. President I'm asking for your support for making my Vision for modernizing America's voting technology a reality during your presidency and any feedback that you or your staff members may have concerning my lifelong passion would be greatly appreciate.

Working together I know we shall make my Vision of a "Chad free voting society" a reality, because a quitter never wins and a winner never quits!

Sincerely,

Michael E. McKinzy Sr. 03/25/2021
